AEG

Electrolux

Ovens, Cookers

AEG-Electrolux have a range of single and double ovens in a variety of colours. AEG-Electrolux offers an array of truly advanced technology from a multifunction oven with fully integrated steam functions to a double oven with electronic interactive display and digital cooking.

AEG-Electrolux single or double cavity range cookers and the 60cm double cavity cookers come in mixed fuel or electric options, giving the choice between a gas or ceramic hob. All cookers come with a range of high-performance features for perfect cooking results.

Features

Multifunction.
AEG-Electrolux multifunction ovens combine fan cooking with conventional cooking, giving up to 10 oven tailored functions for exceptional cooking versatility.

True fan - Ventitherm®.
The True fan – Ventitherm® cooking system gently circulates hot air evenly throughout the oven cavity, keeping food moist and achieving perfect cooking results.

This function is very economical and quicker, as the oven heats up faster, eliminating the need to pre-heat for most dishes and reducing temperatures by 20%, saving both time and energy.

The precise true fan cooking system ensures no transfer of flavours, so sweet and savoury dishes can be cooked together. True fan - Ventitherm® allows a greater range of cooking temperatures from 30°C-300°C, ideal for bread proving to meringues, to the traditional Christmas turkey dinner.

Fan controlled defrosting.
A hygienic and gentle way to defrost food. Suitable for even the most delicate items such as cream cakes, this defrost function slowly circulates room temperature air around the food, defrosting it in less than half the usual time.

Conventional cooking.
Heat from the top and bottom elements provide traditional cooking, ideal for baking breads and cakes on one level. This function creates zoned areas of heat, hotter at the top – cooler at the bottom, suitable for cooking foods of a similar flavour that require slightly different oven temperatures.

Rotitherm® roasting.
Heat produced by the top elements is circulated around the food by the fan. This clever setting gives the perfect authentic spit roast effect for meat, poultry and roasting potatoes; all the benefits of a rotisserie without the mess.

Fan baking.
The True fan – Ventitherm® and base element combine together to give direct heat to the base of foods making this setting the perfect environment for baking. It is ideal for crisping the base of pizzas, quiches and cooking in dense cookware.

Moist fan baking.
This clever function uses the True fan – Ventitherm® setting whilst closing the ventilation valve therefore retaining more moisture in the oven cavity. This function is excellent for baking foods that require a moister cooking environment e.g. light fluffy fatless sponges and baked soufflés.

Base heat finishing.
Heat from the bottom element only. Perfect for reheating pies and pastries as it keeps the pastry crisp. It can also be used to warm plates.

Top heat browning.
A gentle heat from the top element only, ideal for browning lasagne or shepherd's pie.

Slow cook.
Uses low temperatures to gently tenderise and cook foods through. This is ideal for casseroles and joints.

Meat probe.
Simply place the probe into the meat and use the manual to select the correct internal temperature for your preferred taste. When the tip of the probe reaches this temperature the oven switches off. It takes the guesswork out of cooking and ensures your food is never under or over cooked. Ideal for joints, encroute dishes and even a nut roast.

Keep warm.
Heat from the top and bottom elements are used to maintain a set temperature of 80°C, ideal for keeping food warm until ready to serve without drying the food out.

Heat and hold.
This setting enables you to programme the oven to automatically switch to the Keep warm setting after completion of baking or roasting. This option runs at 80°C for 30 minutes, after which the oven automatically switches itself off.

Speedcook function.
This function may be used with True fan – Ventitherm®, fan baking, conventional and Rotitherm® roasting. The oven reaches the required temperature almost immediately, eliminating the need to preheat the oven. This efficient feature is ideal for cooking convenience foods or recipes such as biscuits that may quickly spread into one another.

Dual circuit variable grill.
Uses the inner and outer parts of the grill element to provide full width even grilling, ideal for larger portions. The heat is controllable.

Single circuit variable grill.
Uses only the inner part of the grill element, ideal for smaller portions such as 2 pieces of toast. The heat is controllable and using one element is more energy efficient.

The healthier way to cook.

The AEG-Electrolux combination oven is the only full size multifunction single oven with steam. Steam is the chef's secret that helps them to create food that is crisp and golden while at the same time being delicious and succulent.

Multifunction oven with steam.

Hot air and steam combine to deliver fantastic results with excellent health benefits, in both taste and preservation. Restaurants have had this advantage for years and the AEG-Electrolux B98205M is the only full size oven on the market that offers multifunction cooking with three fully integrated steam functions.

Food can be cooked to perfection with all the texture, colour and flavour preserved. Food is crisp on the outside whilst moist and succulent on the inside, so it looks and tastes better. The steam also isolates the food cooking, so that flavours do not mingle, meaning you can cook sweet and savoury at the same time.

Cooking with steam is also a healthier option retaining a far higher level of nutrients, vitamins and minerals in the food – reducing the need for fat and salt – with the ability to give golden crispy results. The AEG-Electrolux oven evens 'steam cleans' itself when the cooking is done.

Steam settings

Vigorous steam.

The steam generator works with a fixed temperature at 96°C, to deliver a constant flow of steam. Ideal for vegetables, rice and fish, it ensures that all the vitamins and nutrients are retained within the food.

Interval steam.

This unique feature alternates steam and fan cooking with 25% steam and 75% hot air. Food is crisp on the outside but moist and succulent on the inside, so it looks and tastes better. Ideal for roasting, baking and complete meal cooking.

Interval plus steam.

This feature alternates between steam and fan cooking using 50% steam and 50% hot air. Food doesn't dry out, and the quality is preserved, making it ideal for reheating prepared dishes or heating convenience food.

Steam cleaning.

A special preset cleaning programme, which utilises the vigorous steam function. It helps eliminate the need for commercial oven cleaners. Simply wipe out after the programme ends.

Double ovens (built-in)

D88106M Stainless Steel

Best in class, combines great functionality with style, offering a wide choice of cooking functions in both ovens. €1129. EMC €5. Total: €1134.

Microwaves

The AEG-Electrolux microwave range offers so much more than just a quick, convenient means of cooking, reheating or defrosting food; they are engineered to combine outstanding performance with optimum user friendliness and cooking flexibility.

Optimum cooking flexibility.

Anti-fingerprint stainless steel.
Our AEG-Electrolux models are designed with anti-fingerprint stainless steel, taking the style and elegance of stainless steel one stage further - ensuring your microwave always looks good.

Space solutions.
All our microwaves are small on the outside but spacious on the inside. Our range even includes a combi microwave that has a huge 38 litre capacity without taking up any more space in the kitchen than a standard microwave.

Automatic programmes.
Cleverly devised programmes allow defrosting, cooking and combination cooking to be accomplished automatically at the touch of a button. Simply enter the weight of the food, and the microwave does the rest.

A range of cooking programmes.
Combine microwave and traditional cooking with the DUO range (with integral grill) and COMBI range (with fan and grill cooking). Traditional cooking methods can be used independently or with the microwave function for maximum time saving.

Microwave power levels.
A choice of 1000W, 900W or 800W are available within the AEG-Electrolux range. The levels are adjustable, dependant on the type of cooking.

Combi microwave.
Combine the microwave with the browning and crisping effect of grilling or fan cooking, giving you speed and fantastic results.

Quartz grill.
Fast heat up time, with a smooth surface for easy cleaning.

True fan cooking and microwave.
Combination microwave - the fan cooking with microwave, for golden brown food cooked in about half the time.

Quick start control.
Enables you to cook for 30 seconds at full power at the touch of a single button, ideal for common tasks such as warming up drinks. Can be pressed up to 5 times continuously for convenience.

More/less time option.
For use with auto cook or defrost programmes. A simple button enables you to add more or less time to the cooking or defrosting time depending on the desired results, for example to cook medium or rare steak.

Glass turntables.
All microwaves have glass turntables to ensure even cooking, and an option to use without, if baking with a large dish.

Installation.
All AEG-Electrolux microwaves are fully built-in so no building-in kits are required, giving easy installation and a perfect fit.

The MCC3880EM, MCD3880EM and SOLO microwaves come with a choice of installation positions and can be built in under counter as well as in-column, offering the flexibility to fit into your kitchen design. All other models should be built in-column and 60cm models can be built over an oven or refrigerator. The 17 litre models are available in a choice of 50cm or 60cm wide versions for installation in a ventilated aperture 30cm deep.

MCC3880EM Stainless Steel

Fully built-in combination microwave.

Compact range

Create a unique design statement with a bank of AEG-Electrolux compact products to specify exactly how your kitchen looks and performs, combining products to achieve your perfect cooking area.

Make the most of precious kitchen space with AEG-Electrolux's small but beautiful range of compact appliances. Perfect for kitchens where space is at a premium.

...concentrated performance.

Range highlights

Compact multifunction oven with steam.

The beautiful AEG-Electrolux multifunction compact oven with steam combines fan cooking with conventional cooking and for exceptional cooking versatility two steam cooking options.

Hot air and steam combine to deliver fantastic results with excellent health benefits, in both taste and preservation in this multifunction oven with steam settings. Food can be cooked to perfection with all the texture, colour and flavour preserved. Food is crisp on the outside whilst moist and succulent on the inside, so it looks and tastes better. The steam also isolates the food cooking, so that flavours do not mingle, meaning you can cook sweet and savoury at the same time.

Cooking with steam is a healthier option retaining a far higher level of nutrients, vitamins and minerals in the food – reducing the need for fat and salt – with the ability to give golden crispy results.

Compact microwave.

The stylish AEG-Electrolux compact microwave with grill offers a powerful 1000w microwave with five power levels and a grill to give crisp, brown results. A selection of preset programmes makes setting the oven easy and takes the guesswork out of cooking.

Coffee machine.

A stunning addition to your kitchen, an AEG-Electrolux coffee machine is always on hand to deliver the perfect coffee, bringing Italian espresso coffee into your home. The coffee machine offers true versatility with a coffee bean grinder to grind fresh coffee, a coffee press function to compress pre-ground coffee or the option to utilise coffee pods. There is no need to plumb the coffee machine in, as BRITA® water filters are included as standard to ensure optimum water quality is maintained. The steam spout is perfect for cappuccino, latte or even hot chocolate.

Accessory drawers.

Complementing the range of compact products perfectly with a stylish recessed handle and anti-fingerprint stainless steel design, these drawers offer a useful storage place for oven or coffee accessories combining to fit a 45cm niche.

Warming drawers.

Not only will the AEG-Electrolux warming drawers warm your plates, the keep warm option maintains a set temperature of 80°C perfect for keeping food warm until ready to serve without drying the food out. Combine with an AEG-Electrolux single oven or compact products for your own unique kitchen design and performance.

Front-line future

Front-line future is a modular range of hobs and accessories for those creative chefs who want to specify exactly how their kitchens work creating a truly unique hob cooking area.

AEG
Electrolux

Stylish aesthetic design.

Highlights.
The Front-line future range with Alutec® is a beautiful flexible modular cooking system that allows you to customise your kitchen to your individual needs enhancing any high-end kitchen design. Choose from a range of gas, ceramic or Induction hob units, and then complete your kitchen with a barbecue grill, a worktop down draught extractor or the stylish Teppan Yaki. The Alutec® strip can be removed on all models for easy cleaning, or replaced with a stainless steel strip if desired, to perfectly complement your kitchen – available as an optional extra.

Front-line future Teppan Yaki.
The Teppan Yaki has been a major influence in Japanese cooking for many years as it seals the food extremely quickly. AEG-Electrolux's Front-line future Teppan Yaki combines an award winning appearance with high performance enabling you to achieve these results in your kitchen. It uses the latest advanced reverse Induction technology ensuring the surface heats quickly and efficiently, perfect for meat, fish and vegetables.

Barbecue grill.
AEG-Electrolux's Front-line future barbecue grill enables you to griddle your food for that delicious barbecued taste at any time of year. It will give perfect results on meat, seafood and vegetables and is extremely healthy as no additional fat or oil is needed. The barbecue grill includes a drip tray and lava stones to absorb any fat when cooking meat. Sleek touch controls ensure precise heat selection.

Front-line future down draught extractor.
The down draught extractor from AEG-Electrolux complements the Front-line future range combining chic style with high performance. The down draught extractor sits in the work surface and touch control operation elevates the extractor from the work surface at different heights, extracting from either the left, right or both sides. This clever extractor fully retracts so that it sits neatly at the worktop level when it is not in use.

Gas on glass.
The AEG-Electrolux stunning range of Front-line future modular gas hobs have the gas burners mounted on ceramic glass, offering the stylish aesthetic of ceramic with the versatility of gas cooking. The range features a powerful wok burner perfect for stir-fries, achieving the high temperatures needed and the cast iron pan support, suitable for flat or curved based woks, giving a professional look.

Ceramic.
The AEG-Electrolux Front-line future range also includes a 2-zone ceramic hob with Hilight zones that reach full heat capacity in less than 5 seconds for excellent efficiency. This hob has touch controls for precise heat selection and features stop and go making it easy to deal with unexpected interruptions.

Induction.
Fast, precise and controllable, Induction cooking is becoming an increasingly popular choice for the discerning chef.
The AEG-Electrolux Front-line future 2 zone Induction hob is the ultimate in electric hob cooking offering the fastest, most efficient, flexible cooking results with touch controls for complete precision. The Induction hob features AEG-Electrolux's highly intelligent Automax function for automatic zone control.

Induction wok.
The AEG-Electrolux Front-line future Induction wok is a real asset providing all the benefits of a traditional wok burner coupled with the ultimate performance of Induction technology. Fast, precise and controllable with a sleek, easy to clean finish and touch controls for precise heat selection. For cooking perfection, a special Induction wok is included to fit the hob.

Hobs

AEG-Electrolux offer a vast range of stylish hobs. Gas on glass hobs are perfectly formed with cast iron pan supports. Ceramic and Induction hobs will also enhance the appearance of any kitchen, with sleek bevelled edges and smooth touch controls.

Stunning visual impact.

AEG-Electrolux offers a vast range of stylish hobs with the very latest technology for high performance cooking with stunning visual impact, including our design-award winning Maxi-sense models. Ceramic and Induction hobs add form and function to any kitchen design, with sleek bevelled edges and smooth touch controls.

Perfect in form

AEG-Electrolux ceramic and Induction hobs are designed to be the focal point of your kitchen, combining the very latest technology, innovative and practical features with elegant designs.

AEG-Electrolux electric hobs offer a range of style options including polygon and rectangular shapes, 103cm widths and bevelled glass edges will enhance the appearance of any kitchen.

Perfect control

'Direktouch'.

AEG-Electrolux's electronic 'Direktouch' controls use the very latest digital technology to ensure precise heat selection. The electronic touch controls enable you to directly access the desired cooking level or simply slide your finger along the scale until you reach the required heat setting.

Automax.

AEG-Electrolux's highly intelligent Automax function provides fantastic automatic zone control, so you do not have to constantly monitor the pans on the hob. After selecting a power level and cooking time, this function brings the zone up to the boil and will then reduce it to the pre-selected power level for the remainder of the cooking time.

Stop+Go.

At the touch of a button, all zones are reduced to a keep warm level, and then when the button is touched again it returns the zones exactly to the previous level. This feature is perfect when you need to leave the hob for an unexpected call.

Power booster.

Most AEG-Electrolux hobs also feature the Power booster function providing an intense rapid heat up, saving time.

Timer.

A timer of up to 99 minutes can be programmed for each individual cooking zone allowing you precise control. Once the cooking time is complete, the hob will automatically switch itself off and an acoustic signal will sound.

Perfect in function

All AEG-Electrolux ceramic hobs feature Hilight zones. This latest heat technology incorporates a fine ribbon element under the glass to provide full heat in less than five seconds. Extremely responsive, it saves both time and energy.

Multi-purpose zone.

An elongated oval zone that can be used as a single zone with just the circular section activated or extended to accommodate casseroles and fish kettles.

Triple zone.

This ceramic cooking area comprises three different sized zones, which can be activated to complement the size of saucepan being used.

Dual zone.

Convenient and highly efficient, this two zone cooking area can be used for larger pans or activate the middle section for smaller cookware.

Perfect safety

For complete peace of mind, many of AEG-Electrolux's hobs can be locked to prevent children accidentally turning it on. In addition, the control lock prevents any alteration or activation of the hob's settings. Simply lock the controls once the cooking functions have been selected. This feature can also lock the hob in the off position for added peace of mind.

Many AEG-Electrolux electric hobs automatically switch off if left on for excessive time periods.

Precise control

Gas hobs

Perfect in function

Gas hobs give instant heat, economy and controllability. In addition, AEG-Electrolux's special burner design produces a clean and perfect flame, giving total cooking flexibility and precise results. Our gas hobs offer a range of burner sizes to complement all cooking styles.

Wok burner.

Ideal for stir-fries, our wok burners comprise three individual circles of flame in one 4 or 5kW burner for maximum heat.

Rapid burner.

This large 3kW burner is perfect for use with larger pans as it produces a high heat output.

Semi-rapid burner.

A medium 2kW burner for everyday cooking.

Simmer burner.

A smaller 1kW burner ensures perfect simmering and is ideally suited for smaller pans.

Perfect safety

All AEG-Electrolux gas hobs are designed with safety in mind. Thermocouples ensure if the flame is unexpectedly extinguished, the gas is automatically shut off from its source. This advanced safety feature allows you to install the hob wherever you desire.

95852GM

Hoods

With a variety of sizes and the choice of extraction or recirculation mode, AEG-Electrolux has a range of hoods suitable for all kitchens and cooking needs. Whisper-quiet operations ensure your kitchen is cleared of cooking odours efficiently and quietly.

For a peaceful kitchen environment.

Perfect in form

AEG-Electrolux has an extensive range of cooker hoods to suit all needs, whether you want to be discreet or make a bold design statement. Integrated, canopy and telescopic hoods are concealed discreetly in furniture to blend in with your kitchen furniture, while our designer or chimney hoods are designed for maximum visual impact. AEG-Electrolux's island hoods are designed to be suspended from the ceiling over the cooking area.

Perfect control

Precise control.

AEG-Electrolux's powerful range of cooker hoods have a wide choice of different controls so you can adjust your extraction speed to suit every kitchen need, ensuring it is a fresher, more peaceful place to cook or relax. The electronic touch controls are stylish, simple with precise settings to adjust speed levels and hood lights. The LED display indicates the extraction rate and when the filters need changing or cleaning.

Automatic sensor.

This ingenious sensor system takes away the guesswork involved in selecting an extraction level. The sensor controls the intensity of the extraction, always working at the optimum level. They detect hob heat, ambient temperature and humidity levels and ensure that the hood works at exactly the right level to rid your kitchen of odours.

Variable speed control.

Precisely controls the rate of extraction, which can be varied to suit different types of cooking, providing optimum efficiency at minimal costs.

Perfect safety

To optimise efficiency and performance of the cooker hood it is important to select the correct hood with an appropriate extraction rate for your kitchen environment. To help ensure you select the correct cooker hood, the measurements in each of these boxes relates to the floor space of the kitchen.

Extraction rates.

This is the level at which the cooker hood clears cooking vapours from the kitchen environment. AEG-Electrolux cooker hoods are measured in cubic metres per hour and are in accordance with IEC standards.

Extraction mode.

Extraction is the most efficient method of installation if you are positioning the hood on or near to an external wall and requires a ducting kit to extract the cooking vapours externally, giving a pleasant kitchen environment, which is free from cooking odours. AEG-Electrolux recommends for each cooker hood the ideal size ducting kit to ensure optimum performance. Ducting kits are available as an optional accessory.

Recirculation mode.

The hood draws in the cooking vapours, filters the air through the charcoal filter and then re-circulates the cleaned air back into the kitchen, leaving it free from cooking odours. The majority of AEG-Electrolux cooker hoods are supplied with a long-life charcoal filter that may be washed in the dishwasher and dried in the oven. Standard charcoal filters will need replacing when indicated on the display. For those hoods that do not come with a charcoal filter, it is available as an optional accessory.

Metal grease filters.

The metal filter attracts the grease from cooking vapours, reducing odours, purifying the air and optimising performance. The filter is dishwasher-safe and never needs replacing.

DD9996B

90cm wide designer hood in stunning black glass. €1899.

Cooling

AEG-Electrolux cooling appliances have a range of innovative functions for advanced food preservation, whilst features such as air purifiers and door open alarms provide the ultimate in peace of mind.

Modern, sleek, desirable.

Stylish design.
The AEG-Electrolux cooling range has a stylish design that supports the modern, sleek yet simple kitchen design. The pale blue interiors with Alu-silver and square push buttons complement their modern appearance.

AEG-Electrolux cooling appliances are designed to store food in perfect condition. Whatever the space available, our range has the storage capacity to suit every lifestyle and the appearance to enhance the design of every kitchen.

A range of different sized cooling appliances to suit every kitchen design, from under-counter appliances, to models that can be installed in-column at eye level. For the dedicated wine buff, there is even a wine cooler that will store both red and white wine at the perfect temperature.

Energy efficient.
All AEG-Electrolux models are A or A+, designed to be the most economical cooling products you can buy, whilst silent technology means the noise output is minimal, contributing to a pleasant kitchen environment.

Our cooling models are 100% CFC and HFC free. This means that they cause no harm to the ozone layer, and also do not contribute to the greenhouse effect.

Maintaining perfect conditions.
The holiday mode sets the temperature of the fridge cabinet to 14°C without affecting the freezer. This is very useful particularly on occasions where the fridge will not be used for an extended period of time (e.g. holidays). The temperature set by the holiday mode allows the preservation of food such as butter and eggs and it prevents the creation of unpleasant odours whilst the door remains closed for a long period of time. Once back from holidays it will be easy for the fridge to recover to its normal temperature.

Precision cooling.
The AEG-Electrolux precision cooling system distributes cold air throughout the fridge ensuring an even temperature is maintained for perfect cooling on every shelf. The internal space can be fully utilised giving you more food storage space.

Coolmatic.
By simply choosing the Coolmatic setting, the temperature is set to +2˚C allowing new shopping to be swiftly chilled, which helps preserve the flavour, colour and nutritional value as well as protecting food that is already being stored. This function automatically returns to the pre-selected temperature.

Tilted wine racks.
Tilted wine racks are ideal for storing wine in its optimum condition.

Precise control.
A host of advanced features offer you total control over your high-performance AEG-Electrolux cooling appliance. All fridge freezers feature an adjustable thermostat for easy adjustment of the internal temperature of the fridge freezer. The Coolmatic feature on fridges offers you fast chilling of fresh foods, whilst the Frostmatic feature quickly freezes food just placed in the freezer, ensuring all food is stored in optimum condition. Simple controls make operation easy and both Coolmatic and Frostmatic automatically switch off after a set period and return to normal temperature.

Advanced electronic interface.
Advanced electronic temperature controls are simple to use and ensure precise temperature control. The controls are child proof and the LCD /LED display provides reassurance that the optimum temperature is being maintained, providing the best conditions for your food.

High Temperature Indicator signals if the temperature rises (such as during a power cut). Door Indicator (visual and/or audible) signals if the door is open. Service Indicator signals if there is a fault requiring technical assistance.

Air purifier system.
The air purifier system purifies the air that has been passed throughout the fridge and removes odours so they are not transported around the fridge.

Salad drawer.
The extra large salad drawers with humidity control have dividers so that fruit and vegetables can be separated. The humidity control prolongs the life of your fruit and vegetables, keeping them fresh for longer. The glide out runners make loading and unloading extremely easy.

The chill compartment.
The chill compartment operates at a temperature of 1˚C to 3˚C, extending the life of chilled food. Ideal for storage of fresh meat and fish.

Quick chill.
The quick chill function chills bottles and cans in half the time they would usually take in a refrigerator.

6 FREEZER DRAWERS ON GLIDE-OUT RUNNERS	
1 FOLD-DOWN COMPARTMENT	
FREEZER CAPACITY: 266 LITRES / 9.4 CUBIC FEET	
ENERGY RATING	A+

Dishwashing

AEG-Electrolux dishwashers deliver state-of-the-art design, powerful performance and a high quality finish. All of the range is AAA rated, making them highly energy and water efficient whilst still producing optimum results in terms of cleanliness, shine and dryness. There are dishwashers to suit every kitchen with whisper quiet operation for minimum noise levels.

Top performance on all levels.

LCD display.
Smart LCD display provides all the information needed - such as the programme selected and the time remaining in a clear and precise way.

Auto programme.
Now there is no need to decide which programme is the most suitable for the dishes. With auto programme, the dishwasher decides. Using advanced sensors, the dishwasher will modify the time, temperature, water and energy consumption based on the soiling level to produce optimum results in the most efficient way. The temperature ranges from 45˚C to 70˚C, making it ideal for the most delicate of glassware to the dirtiest of dishes.

Night cycle.
In order not to disturb sleep, the night cycle runs at just 39dB, making this the quietest dishwasher on the market.

Quick 55.
This programme runs at 55˚C and can wash a full 12 place setting capacity in just 55 minutes.

Eat-Load-Go.
This specially designed programme is perfect to meet the demands of a busy schedule and is ideal for entertaining. It saves time by enabling the starter dishes and crockery to be washed in time for dessert. The only quick wash that delivers an A rated wash in just 30 minutes, it cleans a four place setting capacity at 60˚C.

Intensive 70˚C.
An advanced wash, where the final hot rinse is extended by 11 minutes to produce a more hygienic and ultra clean finish.

Glass care 45˚C.
Powerful enough to thoroughly clean glasses yet gentle enough to care for them. This feature includes adjustable glass supports for extra stability.

Rinse hold.
A cold rinse removes food deposits and holds the wash until there is a full load.

Auto half load.
Using the latest dishwashing technology, auto half load allows the dishwasher to determine whether there is a full or half load and will moderate the water and energy consumption accordingly.

Multi-tab.
All models come with a multi-tab button, which optimises the cleaning results of all-in-one detergents. It modifies the time and temperature of each phase of the programme to ensure that all elements of the detergent are released at the correct part of the cycle for sparkling results every time.

Active drying.
For an improved drying result, the active drying system aids the natural circulation of moist air through a condensing unit.

Dishwashing

F89020Vi

Very quiet 39dB*(A) dishwasher offering Sensorlogic wash technology.
€1045. EMC €5. Total: €1050.

FEATURES
9 WASH PROGRAMMES, 6 TEMPERATURES
TURBO DRYING
AUTOMATIC 45°C-70°C WASH
INTENSIVE-CARE 70°C ADVANCED WASH
BIO 50°C WITH PRE-RINSE WASH
INTERIOR LIGHT

RINSE AID INDICATOR
AQUA CONTROL
4 WASH TEMPERATURES
12 PLACE SETTINGS
NOISE LEVEL 48DB(A)
ALSO AVAILABLE IN BLACK

Energy A Class | Wash A Efficiency | Dry A Efficiency | Water Consumption 12 l

Laundry

The AEG-Electrolux range of fully integrated and freestanding laundry appliances combines sophisticated styling with latest technology and high quality finish.

The optimum wash performance.

Control.

Time save.
For total control over the duration of the wash, the time save option offers three settings – normal, quick and very quick - reducing the time of the programme whilst still providing an A rated wash. Reduce the wash time by up to 25% for a 6kg (30shirts) load at 60°C by pressing the button once and up to 60% by pressing it twice.

Delay start.
Ensures laundry is ready exactly when required, reducing creasing and musty odours.

Aqua control.
An internal system monitors the water level to detect any possible leaks in the inlet pipe or wash drum. This completely eliminates any possibility of flooding.

Sensor drying.
All our AEG-Electrolux washer dryer laundry appliances give you exceptional drying results and total control. Simply choose the required level of dryness from machine iron for slightly damp clothes to extra dry for ready-to-wear clothes. The machine will sense when the clothes are dried to the specified levels and automatically stop the machine. With the sensor dryer, you do not need to keep checking if your clothes are dried and you also save on energy costs and avoid over drying as well.

Variomatic spins.
Alternating progressively faster spinning with frequent tumbling stages provides the best possible wash results with minimal creasing.

Care.

Innovative programmes.
For optimum wash results, AEG-Electrolux washing machines offer an outstanding range of programmes. The wool plus programme gently rocks woollens at 40°C for an effective yet sensitive clean. The delicate programme is designed for mixed fabrics found in delicate clothes.

Eco wash system.
The eco wash system ensures maximum wash efficiency as it prevents any loss of detergent. The eco valve ensures that all the detergent stays in the wash drum by closing the drain area completely.

Easy iron.
The easy iron option reduces the need for ironing by up to 50% through actively reducing creases in fabric caused throughout the wash and spin cycle.

Refresh programme.
Refresh is a quick wash programme for lightly soiled or worn once clothes which is great at removing any odours and refreshing clothes. In the refresh programme up to 3kg (15 shirts) of clothes are washed at 30 °C.

Sensitive option (washers only).
Designed specifically for those who are extra sensitive to dirt, dust and pollen, this programme is suitable for cotton and synthetics. The fabric is gently moved around while an extra rinse option ensures that any particles are effectively rinsed away.

LAV12700Vit

Fully Integrated Washer Dryer.
€795. EMC €5. Total: €800.

FEATURES
LED TIME DISPLAY
START DELAY
AQUA-LOCK FLOOD PROTECTION
EASY IRON
1200 RPM SPIN SPEED
